

AW-200 Smart Alarm Quick Guide

When you purchase a Sirius AW200 Smart Alarm Base Station every device will be pre programmed for you, Motion detectors, Remotes, Sirens.

In the smart alarm kit box the Devices are labeled as Motion Detector 1 and Motion Detector 2, and the Remotes are Remote 1 and Remote 2 on the App. The detector number will be written on the base of the device. The Sirens will also be programmed

Download the Smart life or Tuya App.

Upon installation of the APP on your phone, the App will guide you through the registering process. Find a location for the base station (usually within the routes WiFi range the base station also requires a power point connection)

Make sure you know the Routers User Name and Password for your Router as they will be needed in the installation process.

Base Station App Connection Setup

- 1 Open the Smart Life or Tuya App.
- 2 Tap Add the new device icon  and then add device.
- 3 Scroll to the Sensor icon and Tap.
- 4 Tap Alarm WiFi.
- 5 On the App enter your Routers User Name and Password then Tap next.
- 6 On your Base Station push the Menu icon and then Tap WiFi and then Tap Smart link.
- 7 On the App Tap Confirm the indicator is blinking rapidly.
- 8 Wait for the configuration to finish then tap Done.

Once you are connected to your router you can now install the devices.

By default the Entry and Exit delays are set to 30 seconds and the user code is **1234**.

Best way to install your devices

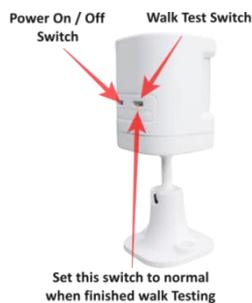

- 1 Place the Base Station in central location that is reasonably close to the router for best WiFi range.
- 2 You will need to test the WiFi range off the devices to the router.
- 3 Take the first device to the area that you want to install, then use a remote control and arm the system and then trigger the device, if the alarm sounds then that device is within range, disarm the system. and now the device can be installed.
- 4 Then name the device in the App.
- 5 Repeat this for the other devices.

Motion Detector

After mounting the Motion Detector don't forget to take the detector out of walk test mode. After installation the device should be in Normal mode. See diagram 1.

The detector number will be written on the base of the device.

Diagram 1
